

## Erratum

The article entitled "*Borrelia burgdorferi* P35 and P37 Proteins, Expressed In Vivo, Elicit Protective Immunity," by E. Fikrig, S. W. Barthold, W. Sun, W. Feng, S. R. Telford III, and R. A. Flavell (Immunity 6, 531–539) requires correction. The initial portion of the p35 sequence in our paper is not a *Borrelia burgdorferi* sequence. The first 114 nucleotides of the p35 sequence are part of the pBluescript vector sequence. The remaining 813 nucleotides of the gene are correct. The complete gene sequence (see Fraser C.M., et al. [1997]. Genomic sequence of a Lyme disease spirochaete, *Borrelia burgdorferi*. Nature 390, 580–586) is designated as *B. burgdorferi* B31 open reading frame BBK32.
